PROFESSIONAL SUMMARY

Junior Backend Developer with experience designing and integrating RESTful APIs, process automation, and web service consumption. Hands-on experience in ERP environments, electronic document processing, and relational databases (PostgreSQL, SQL Server, MySQL). Proficient in Node.js (Express.js), JavaScript, and Python for backend logic, endpoint integration, and Bearer Token authentication, along with service documentation using Swagger. Focused on code quality, best practices, and teamwork, with active interest in cloud computing (AWS and GCP) and developing scalable solutions.

EDUCATION

Systems Engineering | National Technological University of Lima Sur (UNTELS) *April 2021 – July 2026 (expected)*
10th semester – in progress

SKILLS & COMPETENCIES

Backend: Node.js (Express.js), Intermediate JavaScript, Intermediate Python

Databases: PostgreSQL, SQL Server, MySQL

Integrations / APIs: RESTful APIs, Bearer Token, Swagger, Web Service Consumption

Templates / ERP: FreeMarker (dynamic XML templates), Oracle NetSuite

Basic Frontend: HTML / CSS for template and document customization

Cloud Computing: AWS and Google Cloud Platform (GCP) ecosystem

Deployment & Environments: Basic container deployment with Docker

Version Control: Git, GitKraken, GitLab / GitHub (collaborative workflows, branching and pull requests)

Cybersecurity: Ethical hacking with Kali Linux, Metasploit, and Nmap

Architecture & Methodologies: MVC Pattern, Requirements Analysis and Gathering, UML Diagrams, Scrum

Other: Intermediate Excel, Web Scraping with Python

AI Development Tools: Claude Code, Antigravity

Soft Skills: Teamwork, continuous learning, and attention to detail

PROFESSIONAL EXPERIENCE

Junior Developer | LatamReady S.R.L. *May 2025 – Present*

- Developed and customized XML templates with FreeMarker and JavaScript integrations to automate electronic invoicing processes within Oracle NetSuite ERP.
- Implemented automatic XML generation for electronic invoices in Spain, ensuring compliance with Spanish Tax Agency (AEAT) rules and proper submission validation.
- Developed the logic for sending generated XML files to an electronic provider, integrating services via REST endpoints, using Swagger for service documentation and Bearer Token for authentication.
- Customized the ERP system to meet each client's specific needs, adapting invoicing processes to Spanish tax regulations.
- Designed and validated electronic document integration flows in NetSuite, reducing transmission failures and increasing operational efficiency.
- Participated in requirements analysis and solution development, combining technical expertise with an understanding of business processes and tax regulations.
- Implemented web service consumption from a technology provider to manage fiscal events required in Colombia (acknowledgment, receipt, and acceptance/claim) within an automated invoice reception flow via email.

Development & Data Management Intern | Procesos de Medios de Pago S.A. (IZIPAY) *January 2025 – March 2025*

- Developed a Python web scraping script for the INDECOPI platform, extracting and structuring case data into a collaborative Excel sheet.
- Migrated and classified historical contract documentation to the company's internal system, ensuring data integrity and traceability.
- Automated report updates using pivot tables and charts in Excel, reducing report generation time.
